FROM                                     

25X1A6a

SUBJECT { GENERAL Admin/Log  
          SPECIFIC Replacement of Air Conditioner

25X1A6c

REFERENCE:                     

ACTION REQUIRED: Note paragraph 2.

1. Re paragraph 2 of reference, the replacement air conditioner is needed to provide clean cool air in the file room. The sole file room window is normally closed for security reasons and because it opens on the bottom of an air shaft where refuse and dirt from above collect. Were the window opened to provide needed ventilation the file room and its several occupants would soon be covered with dust and grit.

2. Under these circumstances adequate ventilation in the file room can be obtained only through installation of an air-conditioner which at once filters and cools the outside air. During the hot months the file room becomes oppressively hot, and it is for this reason that the request for shipment of a large-size replacement air conditioner is renewed.
